COURBON SAS

Saint-Étienne (42000), France

listing.download.description

Innovative company within a global group

Linked to the VINCI Energies group, Courbon Software is a dynamic and innovative company.

The experience of society is being fulfilled; Courbon SAS's historic -ndash; pre-cursor of the Manufacturing Execution System and the dynamism of its young software development teams, Courbon Software continues the tradition of innovation and the use of new technologies for the optimization of industrial performance.

Courbon Software designed innovative, integrated software; all production processes.

Our software suites are developed according to the requirements of each sector of activity: pharmaceutical industry, agri-food, material chemistry, manufacturing. Courbon Software thus supports the digital transformation of companies and contributes to the growth of their industrial performance. Courbon Software is distinguished by innovative and fully adaptable software in all manufacturing processes.

PHARMACIM and PRODUCIM-

As a market-leading market for information systems, the M.E.S. (Manufacturing Execution System) software company develops software that enables manufacturers to measure, collect and drive information to optimize production, packaging, and storage resources.

Its software, PHARMACIM-reg; and PRODUCIM,s are the result of important research and development programs in collaboration with the big names in the global industry.

These high-value software are developed and implemented on standard platforms (systems, database, standards, architecture, ERP interfaces, automated systems,...) on which our teams have contributed all their expertise in their clients' procedures.

PHARMACIM and PRODUCIM are software intended directly for industrial users to facilitate the management and control of production units, through simple and scalable use.
