

The leading e-procurement solution for Fresh Food

Rennes (35000), France

listing.download.description

Procsea has developed a complete eprocurement platform to meet the specific problems of buyers of fresh products.

The Procsea platform is:

- A standardized and structured purchasing framework: Procsea supports each of your suppliers to structure its offer. The standardised offers are all centralized in your platform.
- An intuitive purchasing interface: allowing you to access the stocks of your suppliers directly, to compare prices, to digitize your purchases, to automate administrative tasks.
- A "universal" platform: our platform is interoperable (designed to fit into existing systems and applications via API, EDI), so the data is centralized in a single source.
- Key tools to meet your problems: invoicing, traceability, sustainability, marketplace stores, supplier interface, dashboards to better manage your activity.

Our customers all testify to the time and reliability savings that our solution has brought them. By digitizing their transactions, they were able to refocus on their core business and increase their productivity while reducing errors.

Use cases:

- Manor: implementation of an internal marketplace to connect suppliers to supermarkets, make data more reliable and track margins. (Switzerland)
- Mytilimer: implementation of an integrated eprocurement platform and strengthening of the link with suppliers. (France)

Contact us to learn more or for a demo of the platform!
